A report on the status of compliances of various conditions stipulated in Environment Clearance granted by MOEF&CC vide letter no- J-11015/50/89- IA.II dated 09-08-1990 for Silewara Underground Mine Project located in Village Silewara, Tehsil-Saoner, Nagpur district in Maharashtra State under M/s Western Coalfields Limited, Nagpur Area - Environment Clearance-reg

v	The reclamation of the subsided area shall be carried out as per plan incorporated in EMP.	<p>Complied.</p> <p>The voids created in underground mine are filled back in parallel in the de-coaled area with sand stowing process to eliminate chances of subsidence. Subsidence is regularly monitored under guidance of DGMS. Till date no detectable subsidence has occurred. All precautions are being taken to prevent the occurrence of subsidence. Mitigatory measures as stipulated in the EMP will be taken, whenever required.</p>
vi	All other pollution control measures listed in EMP will be strictly implemented as per schedule.	<p>Complied.</p> <p>As stipulated in the EMP, following control measures has been implemented & monitored regularly:</p> <p>Control of Air pollution</p> <ol style="list-style-type: none"> i. Water spraying on roads & coal stocks is being done by fixed sprinklers on road / Coal Stock Area. ii. Concrete road of 1.5 Km has been constructed from Silewara Project to Chankapur colony to avoid dust generation during vehicle movement. iii. Around 90% of the produced coal is being transported to TPS Koradi via aerial ropeway mode. (approx. 1.5 KM length.) and rest 10% is being transported via road. iv. Dust suppression arrangement with water spraying on belt & hopper has been provided in the CHP. v. Improved maintenance and Preventive maintenance of plants & machineries is being done regularly. <p>Control of water pollution: Strata seepage water gets accumulated in underground sumps for settlement of fine coal particles. Major part of</p>
